

Ideation Phase

Brainstorm & Idea Prioritization

Date	17 July 2026
Team ID	
Project Name	SB Stocks — MERN Stack Stock Trading Simulation Platform
Maximum Marks	4 Marks

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

For SB Stocks, the team used this process to move from a broad idea — "a platform to practice stock trading" — to a prioritized, buildable feature set for a MERN-based application.

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team held a collaborative session to discuss the challenges faced by beginner investors and finance students who want hands-on trading experience without financial risk. After discussion, the team selected the following problem statement to guide the project:

"New and aspiring investors need a safe, realistic environment to practice real-time stock trading and portfolio management, without risking real money."

This statement became the foundation for SB Stocks — a MERN stack web application that simulates live market trading using virtual currency.

Step 2: Brainstorm, Idea Listing and Grouping

Raw ideas generated during the session were grouped into the following clusters:

Market Data & Trading

- Live, auto-refreshing stock price ticker for major listed companies
- Buy and sell order placement with instant execution
- Candlestick, glowing-trend, and volume/spread chart views
- Top Gainers and Top Losers widgets on the dashboard

Portfolio & Analytics

- Holdings table showing shares, average buy price, and market value
- Total net worth, available cash, and holdings value summary cards
- Profit/loss calculation per holding and for the overall portfolio
- Portfolio weighting donut chart by stock symbol

Account & Wallet

- Secure signup/login with authentication
- Role-based account profile (e.g., User)
- Wallet funding simulator to deposit or withdraw virtual cash

History & Transparency

- Order book listing every executed buy/sell trade with timestamps
- Wallet ledger tracking deposits and withdrawals
- Refreshable trade and audit log history

UI/UX

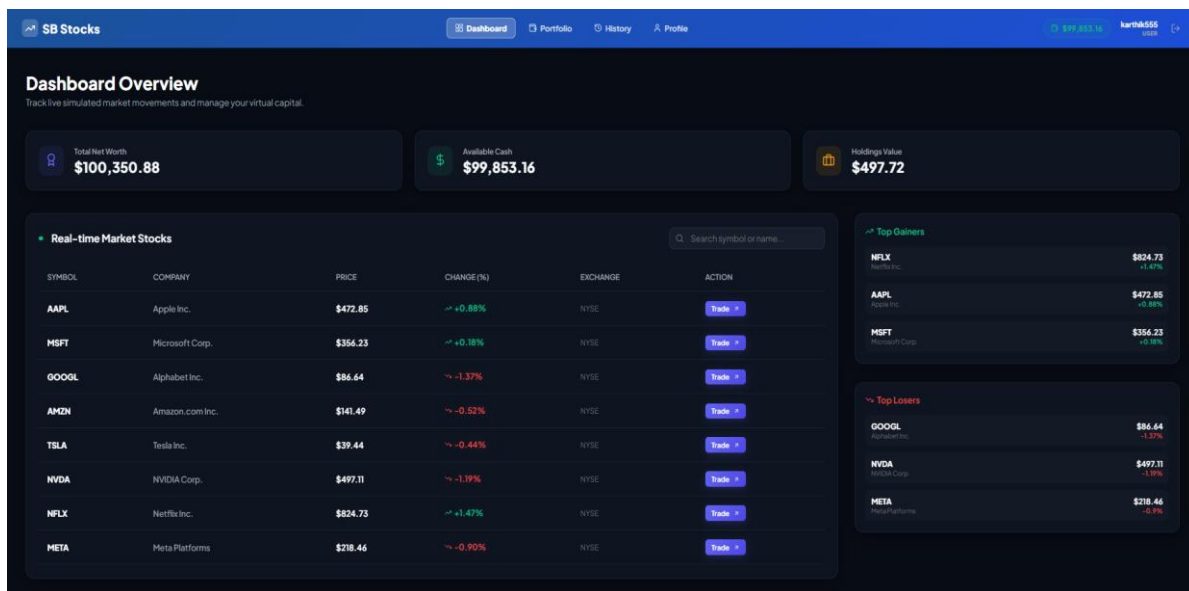

- Clean, dark-themed dashboard with a consistent color system
- Symbol/name search across the stock list
- Responsive layout across dashboard, portfolio, history, and profile pages

Step 3: Idea Prioritization

Each idea was scored against its impact on the core problem statement versus the effort required to build it, to decide what made it into the first release of SB Stocks:

Idea	Impact	Effort	Priority
Real-time stock dashboard with live price ticker	High	Medium	High
Buy / Sell trade execution engine	High	High	High
Portfolio holdings & profit/loss tracking	High	Medium	High
Trade history and wallet ledger (audit log)	Medium	Low	High
Candlestick, line trend & volume charts	Medium	Medium	Medium
Wallet funding simulator (deposit / withdraw)	Medium	Low	Medium
Top gainers / top losers widgets	Medium	Low	Medium
Search & filter stocks by symbol/name	Low	Low	Low
Dark-mode, responsive UI theme	Low	Low	Low

The high-priority ideas — the live dashboard, trade execution, portfolio tracking, and trade history — formed the core of the first working build of SB Stocks:

Implemented outcome of the prioritized ideas: the SB Stocks dashboard with live prices, portfolio summary, and top gainers/losers.
