Define the Problem Statements

Date	17 July 2026
Team ID	
Project Name	SB Stocks — MERN Stack Stock Trading Simulation Platform
Maximum Marks	2 Marks

A well-articulated customer problem statement helps the team focus on what genuinely matters to the people the product is built for. It also builds empathy: understanding how a customer perceives the problem makes it far easier to design the right solution.

For SB Stocks, two representative customer problem statements were defined using the “I am / I'm trying to / But / Because / Which makes me feel” format:

Reference: <https://miro.com/templates/customer-problem-statement/>

Customer Problem Statements

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a college student who is curious about the stock market	learn how buying and selling stocks works by building a simulated portfolio	I don't have real capital or experience to risk on a live market	real brokerage platforms involve real financial risk, KYC paperwork, and a steep learning curve	anxious and hesitant to start, worried that a beginner mistake could cost real money
PS-2	a working professional who wants to test personal trading strategies	track how my hypothetical trades would have performed against real, live market movements	I can't find a simulator that is both realistic and simple enough for casual, regular use	most paper-trading tools are either too basic (static prices) or too complex (full brokerage software)	frustrated, and unable to confidently validate a strategy before ever risking real money

How SB Stocks Addresses These Statements

- **For PS-1:** a risk-free, ₹1,00,000 virtual starting balance and a live, MERN-powered market feed let a beginner practice real buy/sell decisions with zero financial exposure.
- **For PS-2:** real-time price movement, candlestick/trend charts, and a full order/wallet history let a more experienced user validate a strategy against genuine market behaviour before committing real capital.
